

Modulator and Wiggler simulations

Jun Ma, Roman Samulyak, Kwangmin Yu

Department of Applied Mathematics and Statistics
Stony Brook University

2016.3.17

Numerical setting

- Domain
 - Transversal : $4\text{e-}3\text{m}$ ($14 \times \text{Debyelength}$) open boundary
 - Longitudinal : $2\text{e-}5\text{m}$ ($20 \times \text{Debyelength}$) periodic boundary
- Grid number : 20 per Debye length
- Electron
 - Gaussian in x, y
 - Uniform in z
- Ion
 - At center
 - At one σ

Linear focusing field

$$\vec{E}_0(x) = \frac{m_e}{e} \frac{\sigma^2}{r_0^2} (x - x_0)$$

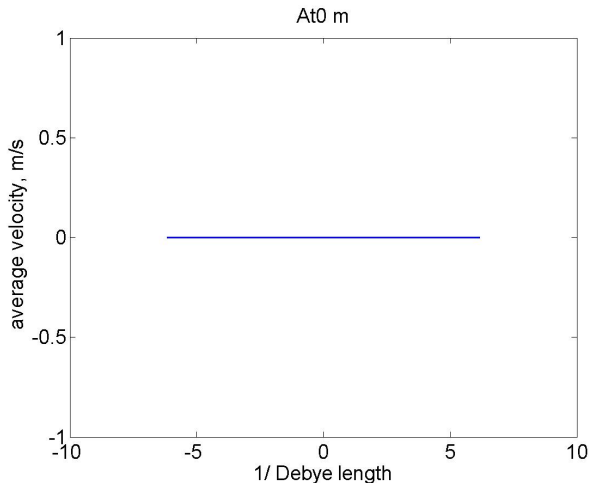

G. Bell et al., VLASOV AND PIC SIMULATIONS OF A MODULATOR SECTION FOR COHERENT ELECTRON COOLING, Proceedings of 2011 Particle Accelerator Conference, New York, NY, USA, MOP067.

Implemented as

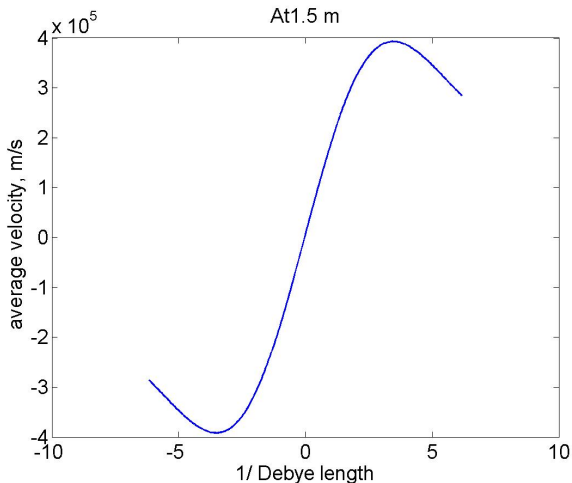

$$\vec{E} = k\vec{x}$$

- Expansion by space charge
- Expansion by thermal velocity

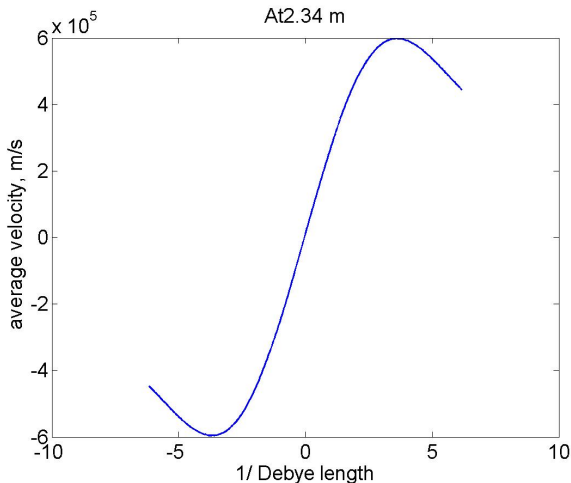

Transversal velocity distribution

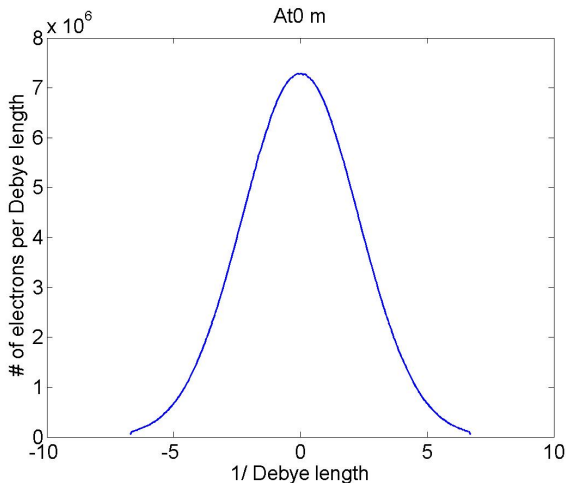

Transversal velocity distribution

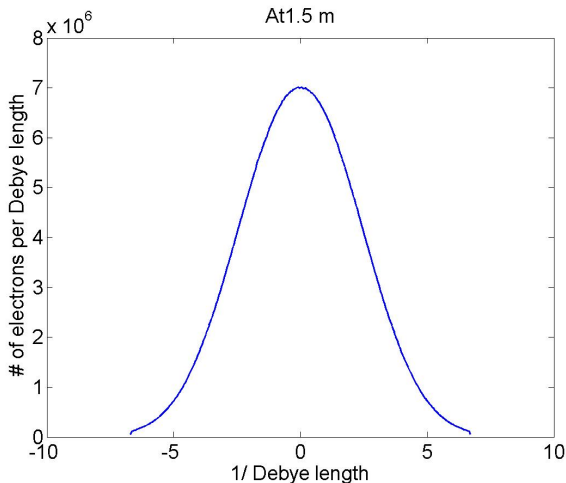

Transversal velocity distribution

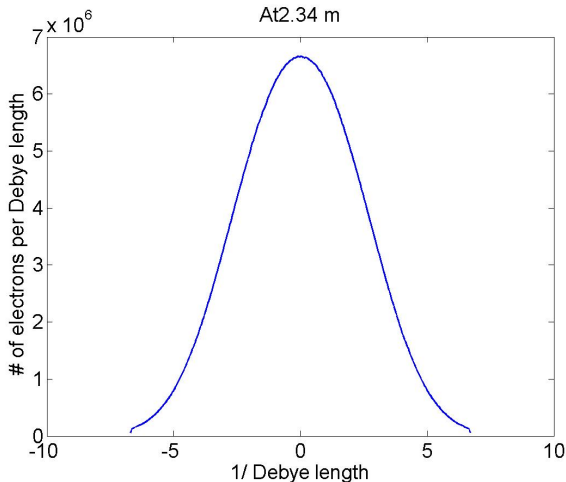

Transversal number distribution

Transversal number distribution

Transversal number distribution

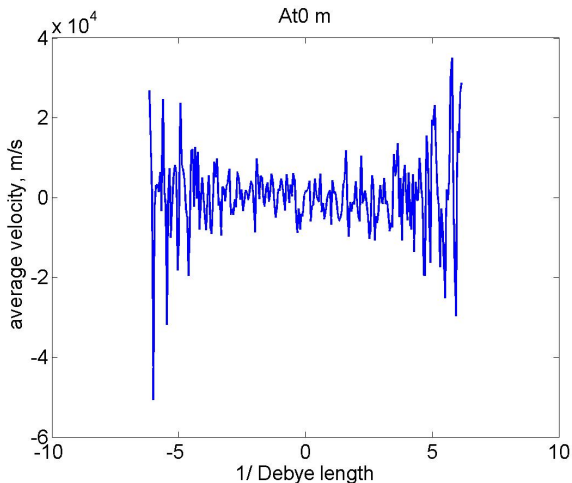

Initial Velocity Distribution

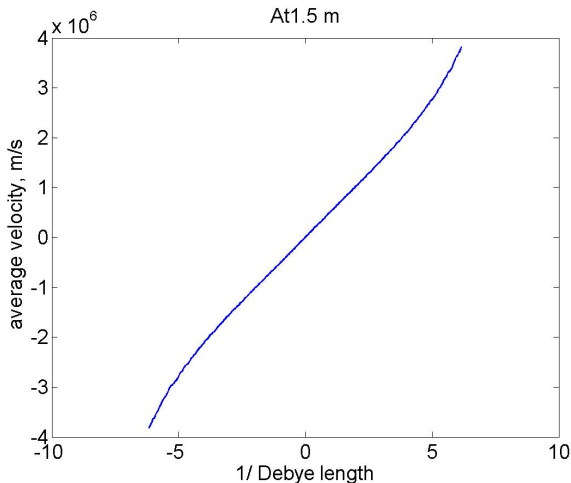

- Kappa2 velocity distribution in beam frame

$$\beta_x = \beta_y = 2e + 6m/s, \beta_z = 3e + 5m/s$$

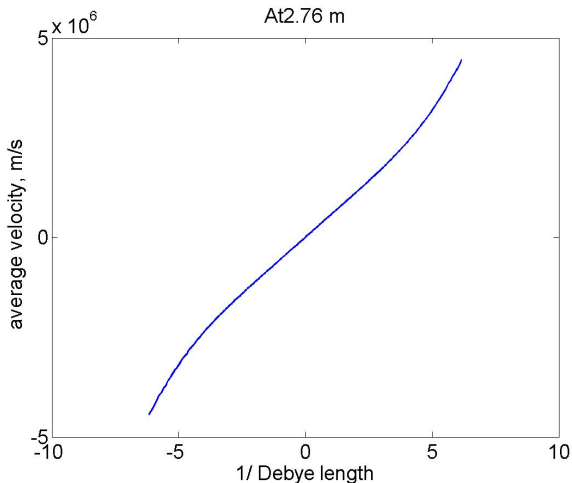

Transversal velocity distribution

Transversal velocity distribution

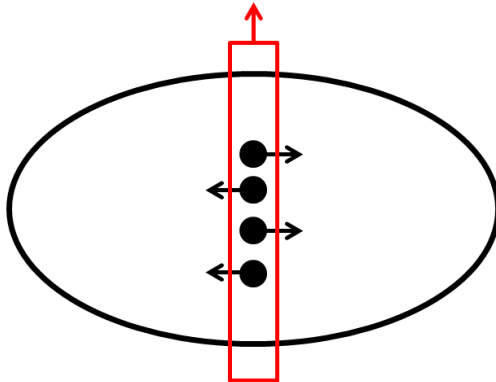

Transversal velocity distribution

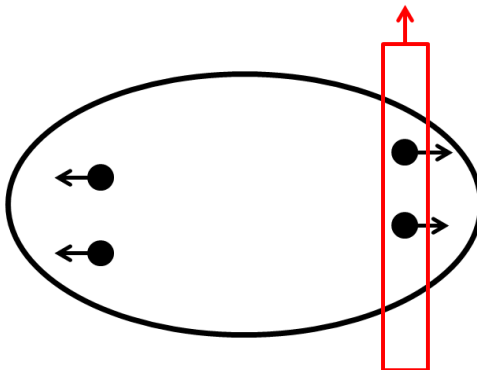

Transversal velocity (initial)

Average velocity is 10^4 m/s

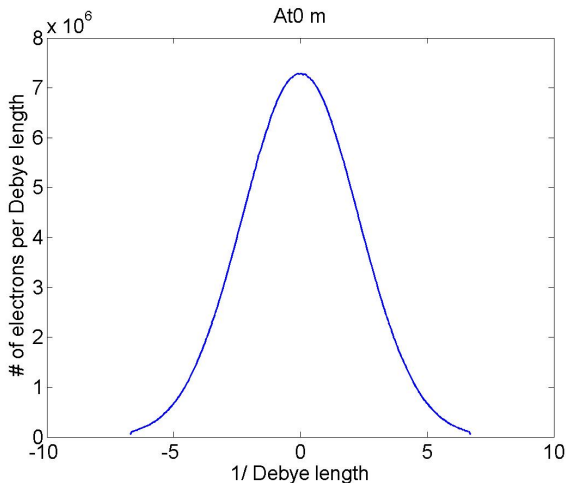

Transversal velocity (later)

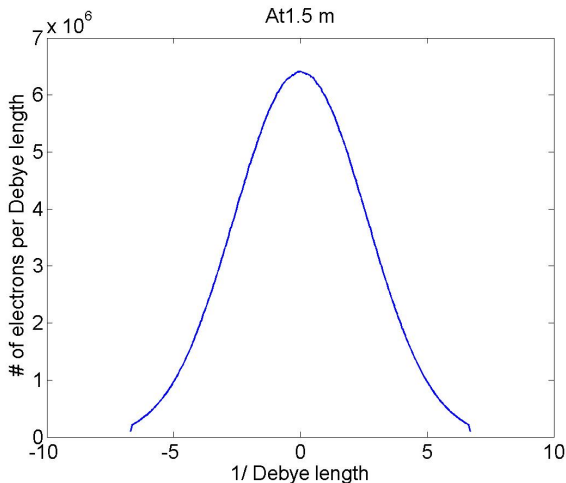

Average velocity is 10^6 m/s

Transversal velocity distribution

- Beam frame
- Take output of modulator as input of wiggler
- Take difference
 - Background electron bunch through wiggler
 - Modulated electron bunch through wiggler

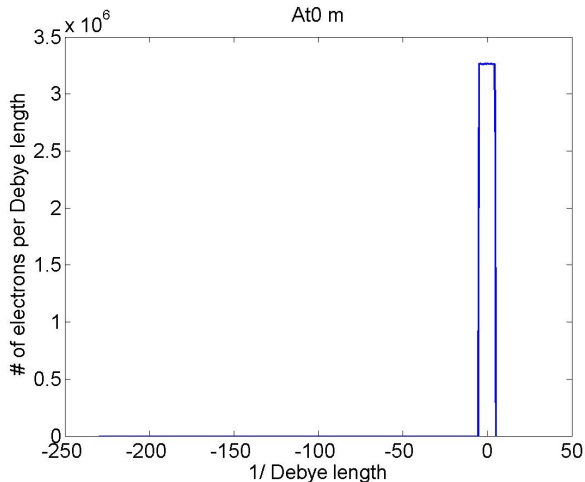

Wiggler structure

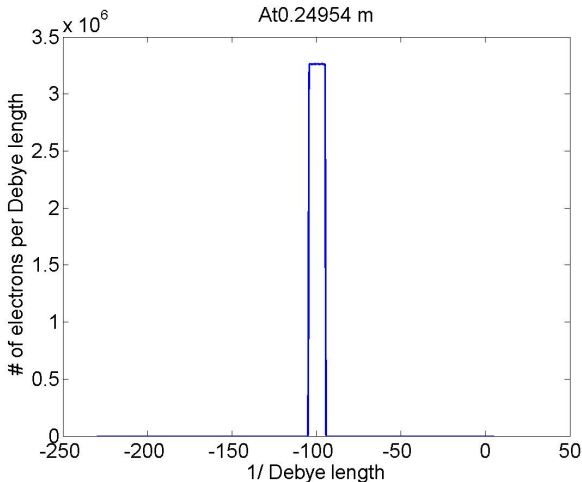

Motion of electron bunch
